

A network diagram consisting of numerous blue circular nodes of varying sizes connected by thin blue lines. The nodes are arranged in a complex, interconnected web, with some nodes having more connections than others, suggesting a hierarchical or central-nodal structure. The diagram is positioned in the upper left quadrant of the slide.

2.3 Statistical Analysis Populations

The following sets will be used for the analyses performed in the study:

- *Enrolled Analysis Set (ENR)*: All participants who have signed informed consent and enrolled into the study.
- *Randomized Analysis Set*: All participants who signed ICF and are assigned a randomization number.
- *Safety Analysis Set (SAF)*: All participants who received the IV infusion (including partial infusion) of Drug or placebo will be included in the SAF.
- *PK Population (PK)*: All participants who received Drug.
- *PK Analysis Population (PKAS)*: All participants in the PK population for whom enough samples are available to determine at least one evaluable PK parameter after the single and/or multiple IV infusion of Drug and who have no major protocol deviations affecting the PK sampling and measurement will be included in PKAS.
